

20/27

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

ARIA

 [\[aria-*\)](#) attributes do not match their roles

▼

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

NAMES AND LABELS

 Buttons do not have an accessible name

▼

 Image elements do not have [\[alt\]](#) attributes

▼

 Links do not have a discernible name

▼

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

BEST PRACTICES

 [\[user-scalable="no"\]](#) is used in the `<meta name="viewport">` element or the [\[maximum-scale\]](#) attribute is less than 5.

▼

These items highlight common accessibility best practices.

INTERNATIONALIZATION AND LOCALIZATION

 `<html>` element does not have a [\[lang\]](#) attribute

▼

These are opportunities to improve the interpretation of your content by users in different locales.

NAVIGATION

▲

Heading elements are not in a sequentially-descending order

▼

These are opportunities to improve keyboard navigation in your application.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).
